

Presents for your consideration:
ImmunoGalactans

- **Activation of immune cells**
- **Enhanced communication between immune cells through cytokine promotion**
- **Promotion of the Complement system**
- **Enhances liver, colon and intestinal microflora health**
- **Inhibition of metastasis**

BioGenesis is proud to present ImmunoGalactans, an Arabinogalactan (AG) product with immune support properties. This fermentable fiber is derived from North American Larch trees. Animal and human studies document its health promoting properties. Specifically, AG has been shown to activate immune cells and enhance cellular communication and signaling. Studies have shown it to have stronger immune stimulating properties than Echinacea. **AG has been shown to stimulate immune function at a dose of 1.5 grams per day.** Liver and colon health are enhanced through AG's ability to enhance the growth of beneficial bacteria and inhibit the growth of bacterial pathogens such as Clostridium perfringens.

Arabinogalactans are naturally present in a variety of plants such as, Echinacea purpurea and Baptisia tinctoria.

These statements have not been evaluated by the Food and Drug Administration. These products are not intended to diagnose, treat, cure, or prevent any disease.

ImmunoGalactans	Amounts per serving
Serving size	2.5 grams
Number of servings per container	40
Arabinogalactans	2500 mg
Suggested Dose: Take 1 teaspoon per day or as directed by a health care practitioner.	

Arabinogalactans have been shown to enhance:

- ❑ Natural Killer (NK) cell activity
- ❑ Tumor necrosis factor (TNF-alpha)
- ❑ Interleukin-1 (IL-1)
- ❑ Interferon-beta 2
- ❑ Macrophage activity
- ❑ Complement System
- ❑ Cell Signaling/Communication
